CHEMICAL ADHESIVES/FOAMS

Chemical Adhesives for anchoring in masonry, rebar connections and cracked concrete.

Fischer FIS EM is a powerful epoxy resin mortar injection system. When combined with a threaded rod, is suitable for pre-positioned and push-through installation. Resin and hardener are stored in two separate chambers and are not mixed and activated until extrusion through the injection capsule in the static mixer. The mortar is injected bubble-free from the drill hole base.

Fischer FIS V is a 2-component injection mortar based on vinyl ester. It is approved for use in cracked and non-cracked concrete, masonry and for special applications. FIS V is thus the universal injection mortar family with guaranteed reliability for practically all areas of application.

Soudal Genius Gun Fill & Insulate PU expanding Foam comes with a specially designed patented trigger mechanism ensuring precise dosage and removing the need for an additional gun. It is easy to use and can be operated with one hand. It is also re-usable up to 6 weeks later. The expansion of the foam makes it the ideal gap filler. The foam is an excellent thermal and acoustic insulator that sticks to practically all building materials such as brick, concrete, insulation materials, pipes, cables, ducts, wood, metals most plastics and polystyrene.
